

Unplug 1 power cord, 2 jumper wires and unscrew 5 bolts

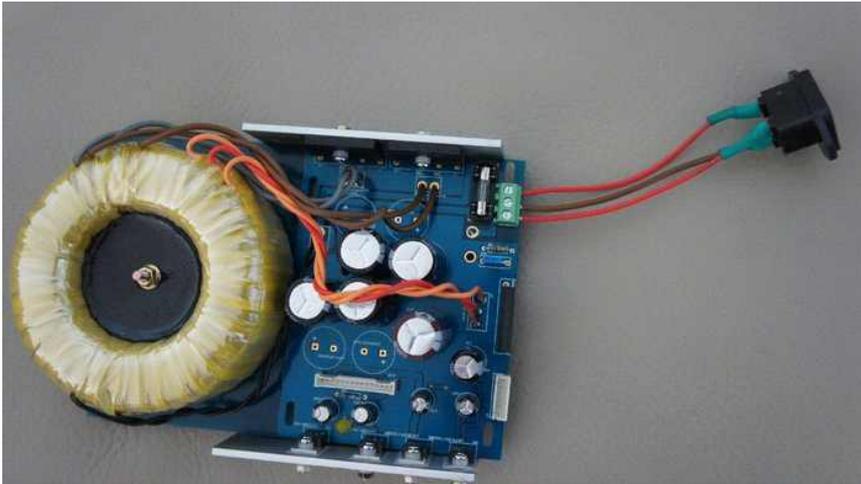

Keep original power board and power cord in safe place. You can restore your OPPO 93 when need.

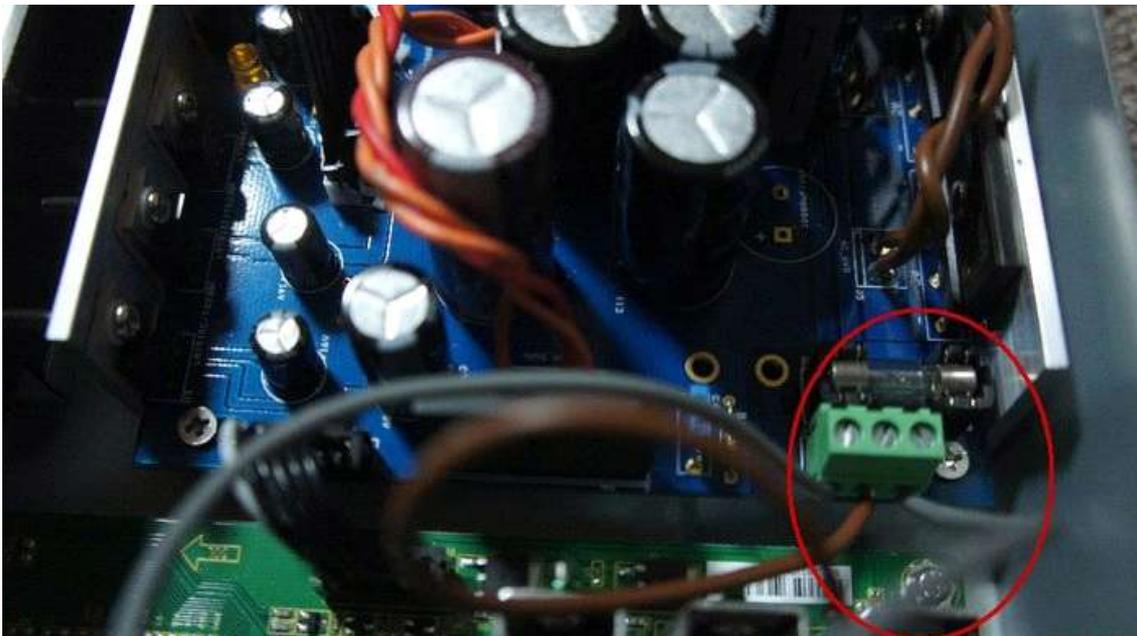

Change the AC plug with enclosed 3 prong one.

Place 15 wires jumper cable over the Blu ray drive as shown in picture. Loosen the 4 bolts located inside of Blu ray drive to take out 15 wires jumper cable

Insert 3 lead wires of power cable to green connector. 2 red (or orange) wires should be placed outer socket and 1 brown wire in center socket as shown in picture

Connect power cord to wall outlet and check whether LED is on. (At this time, don't connect 15 and 6 wires jumper cables).

If OK, connect 15 and 6 wires jumper cables to sockets,
Be sure white stripe side of 15 wire cable should be placed facing transformer

Screw 5 bolts in new power board. You may not use center bolt.

Allow some aging time (may be 1 week)

And make sure that you use power outlet / multi tap which has ground connection.

Without proper grounding, potential of linear power mod OPPO 93 would not be fully fledged.
